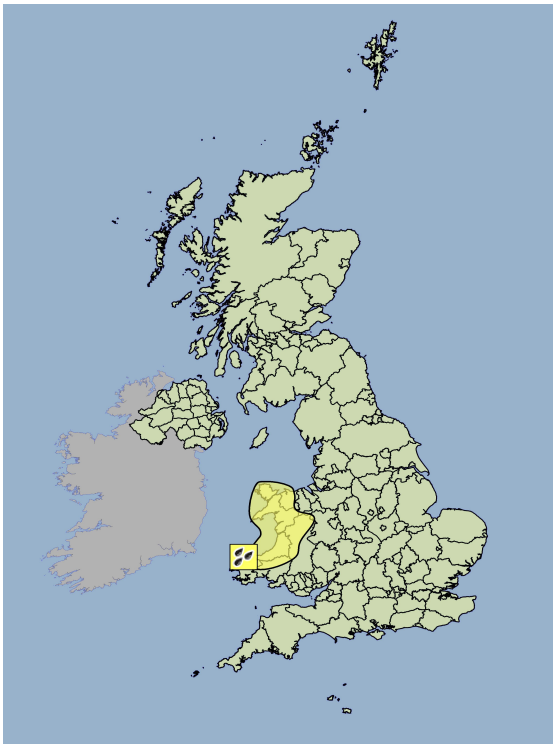
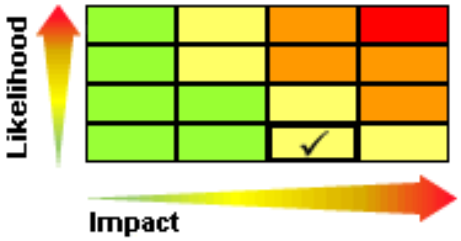
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A frontal zone is expected to move into Wales from the west early on Wednesday and become slow-moving for at least 24 hours, possibly longer. With strong winds and moist air this is likely to generate heavy rain across upland areas in particular, and given the persistent nature of the rain some large rainfall accumulations are likely. 40 to 60 mm is likely quite widely over high ground with over 80 mm in places, and perhaps in excess of 100 mm across prone areas such as Snowdonia.

There is some uncertainty over the behaviour of the front on Thursday as a number of waves develop, and this means that confidence in the duration of heavy rainfall by that stage is relatively low. This warning will therefore be kept under review and updated as and when necessary.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **08:00 on Wed, 02nd Dec 2015** until **23:45 on Thu, 03rd Dec 2015**

Rain is expected to arrive from the west on Wednesday morning and become heavy at times, persisting overnight and into at least part of Thursday.

Given saturated ground and high river levels, be aware of the potential for flooding, leading to disruption to travel, localised property flooding and danger from fast-flowing deep water.
